PROFESSIONAL SUMMARY

Final-year BSc Computer Science student at Nottingham Trent University, on track for an Exceptional First. Highly capable Software Engineer and AI Engineer with hands-on experience engineering intelligent applications, RAG workflows, and cloud-native systems. Proficient in Python, Java, TypeScript and React. Adept at leveraging deep learning frameworks (PyTorch, TensorFlow) and LLMs to build autonomous, data-driven enterprise solutions.

EDUCATION

Nottingham Trent University, Nottingham, England - **BSc Computing Science** | September 2023 – June 2026
On track for First Class Honours. Modules: AI, Cloud Computing, Mobile Dev, Advanced Analysis & Design.

RELEVANT EXPERIENCE

Software Engineer (Freelance) – TRUKBK | March 2026 – Present

- Engineered a high-performance vehicle configurator and client platform from scratch (Frontend & Backend).
- Optimised asset delivery using advanced CSS blending and multiply filters, reducing page load times by 1.2s.

Software Engineer (Freelance) – Arasan Travels | August 2025 – Jan 2026

- Architected and deployed a custom travel-booking platform using HTML/CSS/JS and Google Apps Script integrations.
- Automated 50+ monthly booking approvals and Stripe reconciliations, reducing manual administration time by 15%.

TECHNICAL SKILLS

- **Languages:** Python, Java, TypeScript, JavaScript, SQL, HTML, CSS.
- **Frameworks:** React, Node.js, Django, Flask, PyTorch, TensorFlow.
- **AI Agents & GenAI:** Coze (ByteDance), RAG Workflows, Agentic Systems (ReAct).
- **Tools & DevOps:** Docker, Git, Azure, Cursor and Claude.
- **Concepts:** RESTful APIs, OOP, Agile/Scrum, Software Testing (pytest, JUnit).
- **AI & ML:** Neural Networks, NLP, Deep Learning, MLOps.

PROJECTS

TRUKBK | AI Sales Concierge | ***Coze (ByteDance Platform), GPT-4o, Plugin Integration*** **|** March 2026 – Ongoing

- Developed an autonomous sales agent on the Coze platform to handle customer lead generation and vehicle pricing estimations.
- Integrated multi-modal plugins (Google Search, Calculator) for real-time market data retrieval and automated cost calculation.
- Implemented RAG (Retrieval-Augmented Generation) to dynamically fetch live vehicle pricing and inventory data from custom knowledge bases.

PhatOps | ***React, TypeScript, Tailwind, PostgreSQL*** | September 2025 – December 2025

- Engineered a cross-platform mobile application for restaurant operations, featuring real-time order tracking and secure authentication.
- Reduced frontend rendering latency by 20% through optimised reusable components and Supabase queries.

AI SupplyChain+ | ***Python, SQL, AI Forecasting, Flask, Streamlit*** | June 2025 – August 2025

- Pioneered a cloud-based AI platform for demand forecasting, aiming to reduce inventory waste by 70%.
- Orchestrated Moving Average and Exponential Smoothing models with interactive dashboards for real-time insights.

VGG19 Vision-Language Chatbot | ***Python, VGG19, AIML, NLP, RAG*** | November 2025 – March 2026 ***(University Project)***

- Engineered an intelligent conversational agent combining Natural Language Processing with Computer Vision.
- Utilised a VGG19 deep learning model for high-accuracy image classification (car logos) and AIML for logical reasoning.
- Integrated RAG workflows to provide contextual, fact-based responses based on dynamic user queries.

CERTIFICATIONS

Machine Learning (Google), **AWS Cloud Foundations** (Amazon), **PyTorch Fundamentals** (Microsoft), **Data Analysis** (freeCodeCamp), **Docker Essentials** (IBM).
