PROFESSIONAL SUMMARY

Data Analyst who is the person colleagues bring their data questions to. Two years of commercial delivery alongside study in SQL, Power BI and Excel, spent moving between topics rather than owning one, and building the reports, guides and documentation that let other people answer their own questions next time.

KEY ACHIEVEMENTS

- Replaced a multi branch client's manual file merging with one dashboard, cutting reporting time 80% (client estimate).
- Automated approximately 65% of daily management workload for a 4 branch operator (manager estimate).
- Built a monthly MI pack tracking NHS A&E performance against the 82% target across 120 trusts, with RAG status and written commentary.
- Delivered reporting for 7 client brands across 4 sectors in 7 months, switching topic and audience each time.

TECHNICAL SKILLS

Querying and Languages: SQL, PostgreSQL, Python, Pandas, NumPy, TypeScript, JavaScript
Business Intelligence: Power BI, Power Query, DAX, Tableau, star schema and dimensional modelling, ETL, Plotly, Matplotlib, Excel (pivot tables, XLOOKUP)
Analysis: KPI and RAG reporting, monthly commentary, demand forecasting (Holt Winters, moving average), forecast accuracy (MAPE, bias), safety stock and reorder points, exploratory analysis, scikit learn, KMeans
AI with Oversight: LLM integration (Google Gemini), RAG pipeline design, prompt engineering, grounding and output verification, human in the loop review
Working Practices: Requirements gathering, stakeholder support, reusable templates and documentation, user guidance, market research, Figma, Git, CI/CD (GitHub Actions), Docker, Azure, AWS, Agile/Scrum

PROFESSIONAL EXPERIENCE

Cofounder and Lead Developer (Self employed), *Artim Labs* *Jan 2026 to Sep 2026*

- Led engineering for a UK software studio, delivering 6 live production systems for 7 client brands across retail, hospitality, automotive and travel in 7 months.
- Acted as first point of contact for client data questions across unrelated topics, translating each one into a report, a dashboard change or a straight answer.
- Wrote the documentation and handover notes that let non technical owners use and maintain what I built without coming back to me.

Software Developer (Contract), *PHAT Buns UK* *Apr 2024 to Dec 2025*

- Built PhatOps, an operations platform used daily by 20 staff across 4 branches, with rollout planned for 16 further sites, covering rostering, inventory and expense tracking.
- Modelled the underlying operational data across shifts, stock and expenses, and built the reporting views managers check daily.
- Sourced requirements from the staff using the system daily, surfacing data quality issues at the point of entry.
- Designed the PhatOps screens in Figma and carried out market research and brand reputation work for PHAT Buns.

Data Analyst, *U-Shop International Store* *Sep 2023 to Mar 2024*

- Processed 16 to 20 supplier invoices weekly in Excel, covering data entry, validation and reconciliation against incoming deliveries.
- Flagged discrepancies between ordered and delivered quantities, protecting payment dates and correct supplier routing.
- Produced routine stock and invoice summaries and weekly reconciliation reporting for management.

PROJECTS

NHS A&E Service Performance Reporting Pack, *Python / SQL / Power BI / Power Query* **[↗]** *Oct 2026*

- Built a one page Power BI MI pack from 24 months of NHS England A&E data (4,721 provider rows), tracking 4 hour performance against the 82% national target, 12 hour waits and month on month change, with a DAX driven RAG table and worst 10 ranking across 120 major A&E trusts.
- Automated monthly refresh with a Power Query folder append and reconciled every file to NHS England's published totals in Python; wrote the September 2026 commentary showing performance at 74.4% (7.6 points below target), only 7 of 120 trusts on target, and 12 hour waits up 5,631 to 50,582.

Demand Forecasting and Inventory Planning, *Python / statsmodels / SQL / Power BI* **[↗]** *Oct 2026*

- Forecast weekly demand for the top 25 products of a UK online retailer (1.07 million sales lines) with seasonal naive, moving average and Holt Winters models on an 8 week holdout; the moving average won on 14 of 25 products, and best method selection gave a weighted MAPE of 48.2% with minus 7.5% bias.
- Calculated safety stock and reorder points at a 95% service level and 2 week lead time, and built a Power BI planning page with a weeks of cover slider showing 15 of 25 products needing an order at 3 weeks of cover, falling to 6 at 4 weeks.

Restaurant Analytics Dashboard, *Power BI / DAX / Star Schema (Client)* **[↗]** *Jun to Jul 2026*

- Wrote SQL against a client's live sales database, cleaned 10 raw tables into a 14 relationship star schema, and authored 18+ DAX measures (including a punctuality KPI and a What If wage cost model) behind a 3 page interactive report. Client data confidential.

EDUCATION

Nottingham Trent University, *BSc (Hons) Computer Science* *Sep 2023 to Jun 2026*
Upper Second Class Honours (2:1). Relevant modules: Information and Database Engineering, Advanced Analysis and Design. Student Representative, Sep 2023 to Sep 2024.

CIFA, *UK Financial Regulation and Professional Integrity (160 hours)* *Jun 2026 to Present*
UK Capital Markets, FCA and PRA frameworks, Risk Management, COBS and Financial Crime.
