PROFESSIONAL SUMMARY

Final-year BSc Computer Science student at Nottingham Trent University, on track for an Exceptional First. Hands-on experience engineering full-stack applications, AI/ML models, and cloud-native systems. Proficient in Python, Java, C++, and the MERN stack. Adept at leveraging frameworks like PyTorch and TensorFlow to build intelligent, data-driven solutions and autonomous AI agents using high-code and low-code platforms.

EDUCATION

Nottingham Trent University, Nottingham, England - **BSc Computing Science** | September 2023 – June 2026
On track for First Class Honours. Modules: AI, Cloud Computing, Mobile Dev, Advanced Analysis & Design.

KV International School, Tamil Nadu, India - **AISSCE: IT & Science** | June 2011 – May 2023
Subjects: Mathematics, Computer Science, Physics. Achieved – 90%

RELEVANT EXPERIENCE

Full-Stack Developer (Freelance) – TRUKBK | March 2026 – Present

- Engineered a high-performance vehicle configurator and client platform from scratch (Frontend & Backend).
- Optimised asset delivery using advanced CSS blending and multiply filters, reducing page load times by 1.2s.

Full-Stack Developer (Remote) – Arasan Travels London | July 2025 – March 2026

- Architected and deployed a custom travel-booking platform using HTML/CSS/JS and Google Apps Script integrations.
- Automated 50+ monthly booking approvals and Stripe reconciliations, reducing manual administration time by 15%.

TECHNICAL SKILLS

- **Languages:** Python, Java, C++, JavaScript, SQL, HTML, CSS.
- **Frameworks:** React, Node.js, Django, Flask, PyTorch, TensorFlow.
- **AI Agents & GenAI:** Coze (ByteDance), RAG Workflows, Prompt Engineering, Agentic Systems (ReAct).
- **Tools & DevOps:** Docker, Git, CI/CD, Azure, Linux, Cursor (AI-Native Dev)
- **Core Concepts:** System Design, RESTful APIs, OOP, Agile/Scrum, Software Testing (pytest, JUnit).
- **AI & ML:** Neural Networks, NLP, Deep Learning, MLOps.

PROJECTS

TRUKBK | AI Sales Concierge | ***Coze (ByteDance Platform), GPT-4o, Plugin Integration*** **|** March 2026 – April 2026

- Developed an autonomous sales agent on the Coze platform to handle customer lead generation and vehicle pricing estimations.
- Integrated multi-modal plugins (Google Search, Calculator) for real-time market data retrieval and automated cost calculation.

PhatOps | ***React, TypeScript, Tailwind, Supabase*** | February 2026 - Ongoing

- Engineered a responsive operations dashboard for restaurants, featuring real-time order tracking and authentication.
- Reduced frontend rendering latency by 20% through optimised reusable components and Supabase queries.

AI SupplyChain+ | ***Python, SQL, AI Forecasting, Flask, Streamlit*** | December 2025 - Ongoing

- Pioneered a cloud-based AI platform for demand forecasting, aiming to reduce inventory waste by 70%.
- Orchestrated Moving Average and Exponential Smoothing models with interactive dashboards for real-time insights.

Network Load Balancer | ***Java, JavaFX, Docker, MySQL*** | January 2025 – August 2025

- Developed a GUI-based simulation for load balancing across Docker containers, implementing 3 scheduling algorithms that optimised resource allocation.
- Integrated terminal emulation for UNIX-like commands and managed metadata using a hybrid SQLite/MySQL approach.

CERTIFICATIONS

Machine Learning (Google), **AWS Cloud Foundations** (Amazon), **PyTorch Fundamentals** (Microsoft), **Data Analysis** (freeCodeCamp), **Docker Essentials** (IBM).
