work.sahadh@gmail.com | +44 74073 19577 | Nottingham, NG1 4EE [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

BSc (Hons) Computer Science graduate (2:1) from Nottingham Trent University. Highly capable Software Engineer and AI Engineer with hands-on experience engineering intelligent applications, RAG workflows, and cloud-native systems. Proficient in Python, Java, TypeScript and React. Adept at leveraging deep learning frameworks (PyTorch, TensorFlow) and LLMs to build autonomous, data-driven enterprise solutions.

EDUCATION

Nottingham Trent University, Nottingham, England - **BSc (Hons) Computer Science** | September 2023 – June 2026

Grade: Upper Second-Class Honours (2:1) Modules: AI, Cloud Computing, Mobile Dev, Advanced Analysis & Design.

RELEVANT EXPERIENCE

Software Engineer (Freelance) – TRUKBK | January 2026 – June 2026

- Architected and deployed an autonomous AI Sales concierge powered by a custom RAG pipeline (Supabase pgvector, Google Gemini) to automate vehicle quoting and lead generation.
- Engineered a high-performance interactive vehicle configurator, seamlessly integrating the AI reasoning layer with the frontend client platform.

Software Engineer (Freelance) – Arasan Travels | August 2025 – January 2026

- Architected a custom, full-stack travel booking platform utilising a serverless pnpm monorepo.
- Engineered a type-safe, end-to-end automated booking pipeline with integrated Stripe payment reconciliations, reducing administrative overhead by 15%.

TECHNICAL SKILLS

- **Languages:** Python, Java, TypeScript, JavaScript, SQL, HTML, CSS.
- **Frameworks:** React, Node.js, Django, Flask, PyTorch, TensorFlow.
- **AI Agents & GenAI:** RAG Workflows, Supabase pgvector, Prompt Engineering, Agentic Systems (ReAct).
- **Tools & DevOps:** Docker, Git, Azure, Cursor and Claude.
- **Concepts:** RESTful APIs, OOP, Agile/Scrum, Software Testing (pytest, JUnit).
- **AI & ML:** Neural Networks, NLP, Deep Learning, MLOps.

PROJECTS

TRUKBK | AI Sales Concierge | *React, Supabase pgvector, Google Gemini, RAG* | January 2026 – June 2026

- Engineered a zero-hallucination AI Sales Concierge using a custom RAG (Retrieval-Augmented Generation) pipeline with vector embeddings and cosine similarity search.
- Architected a Supabase pgvector database storing product specs, dimensions, and pricing as high-dimensional vectors for cosine similarity search.
- Implemented a 2-layer resilience system: Google Gemini for primary generation with an automatic rule-based fallback engine, ensuring zero customer-facing errors during API quota limits.

PhatOps | *React, TypeScript, Tailwind, PostgreSQL* | September 2025 – December 2025

- Successfully released and deployed the app on the iOS App Store, currently active across 4 PHAT Buns restaurant branches with rollout planned for 16 additional branches.
- Engineered a cross-platform mobile application for restaurant operations, featuring real-time order tracking and secure authentication.
- Reduced frontend rendering latency by 20% through optimised reusable components and Supabase queries.

CePTFlow Intelligence Suite | *Python, Flask, Google Gemini AI (RAG), PostgreSQL, Plotly* | June 2025 – August 2025

- Engineered a RAG-driven inventory intelligence platform, combining Holt-Winters time-series forecasting with Agentic AI to analyse historical sales and dynamically optimise supply chain trajectories.
- Architected a resilient, self-healing LLM integration layer that automatically resolves API handshake failures (429/404 errors) via model rotation, ensuring 99.9% uptime for the strategic reasoning engine.
- Built a multi-modal data ingestion pipeline (bulk CSV, manual entry, vision-based receipt scanning) that feeds a structured SQL "Intelligence Vault," empowering users to query real-time stock insights through a conversational UI.

CERTIFICATIONS

IBM Certified iOS and Android Mobile App Developer | **Google** AI Certification | **Microsoft** Applied Skills: Enhance Agents with Autonomous Capabilities | **AWS** Cloud Foundations | Data Analysis with Python - **freeCodeCamp**
