

SAHADH FAZAL MOHAMED

work.sahadh@gmail.com | +44 74073 19577 | Nottingham / London, UK | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Eligible to work full-time in the UK — Graduate visa, no sponsorship required

PROFESSIONAL SUMMARY

BSc (Hons) Computer Science graduate (2:1) from Nottingham Trent University. Highly capable Software Engineer and AI Engineer with hands-on experience engineering intelligent applications, RAG workflows, and cloud-native systems. Proficient in Python, Java, TypeScript and React. Adept at leveraging deep learning frameworks (PyTorch, TensorFlow) and LLMs to build autonomous, data-driven enterprise solutions.

EDUCATION

Nottingham Trent University — BSc (Hons) Computer Science

September 2023 – June 2026

Grade: Upper Second-Class Honours (2:1). Modules: AI & Machine Learning, Software Engineering, Information & Database Engineering, Cloud Computing, Mobile Development, Advanced Analysis & Design.

RELEVANT EXPERIENCE

Software Engineer (Freelance) — TRUKBK

January 2026 – June 2026

- Architected and deployed an autonomous AI Sales Concierge powered by a custom RAG pipeline (Supabase pgvector, Google Gemini) to automate vehicle quoting and lead generation.
- Engineered a high-performance interactive vehicle configurator, seamlessly integrating the AI reasoning layer with the frontend client platform.

Software Engineer (Freelance) — Arasan Travels

August 2025 – January 2026

- Architected a custom, full-stack travel booking platform utilising a serverless pnpm monorepo.
- Engineered a type-safe, end-to-end automated booking pipeline with integrated Stripe payment reconciliations, reducing administrative overhead by 15%.

Application Developer & Store Assistant (Contract) — PHAT Buns UK

April 2024 – December 2025

- Engineered 'PhatOps', a cross-platform operations app deployed on the App Store across 4 branches; identified operational bottlenecks in daily store workflows and translated them into app requirements.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, HTML, CSS

Frameworks: React, Node.js, Django, Flask, PyTorch, TensorFlow

AI Agents & GenAI: RAG Workflows, Supabase pgvector, Prompt Engineering, Agentic Systems (ReAct)

Tools & DevOps: Docker, Git, Azure, Cursor and Claude

Concepts: RESTful APIs, OOP, Agile/Scrum, Software Testing (pytest, JUnit)

AI & ML: Neural Networks, NLP, Deep Learning, MLOps

PROJECTS

TRUKBK | AI Sales Concierge — React, Supabase pgvector, Google Gemini, RAG

January 2026 – June 2026

- Engineered a hallucination-resistant AI Sales Concierge using a custom RAG (Retrieval-Augmented Generation) pipeline with vector embeddings and cosine similarity search.
- Architected a Supabase pgvector database storing product specs, dimensions, and pricing as high-dimensional vectors for cosine similarity search.
- Implemented a 2-layer resilience system: Google Gemini for primary generation with an automatic rule-based fallback engine, preventing customer-facing errors during API quota limits.

PhatOps — React, TypeScript, Tailwind, PostgreSQL

September 2025 – December 2025

- Successfully released and deployed the app on the iOS App Store, currently active across 4 PHAT Buns restaurant branches with rollout planned for 16 additional branches.
- Reduced frontend rendering latency by 20% through optimised reusable components and Supabase queries.

CePTFlow Intelligence Suite — Python, Flask, Google Gemini AI (RAG), PostgreSQL, Plotly

June 2025 – August 2025

- Engineered a RAG-driven inventory intelligence platform, combining Holt-Winters time-series forecasting with Agentic AI to analyse historical sales and dynamically optimise supply chain trajectories.
- Architected a resilient, self-healing LLM integration layer that automatically resolves API handshake failures (429/404 errors) via model rotation.
