

SAHADH FAZAL MOHAMED

work.sahadh@gmail.com | +44 74073 19577 | Nottingham / London, UK | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Eligible to work full-time in the UK — Graduate visa, full right to work (sponsorship required in future)

PROFESSIONAL SUMMARY

BSc (Hons) Computer Science graduate (2:1) from Nottingham Trent University and co-founder of Artim Labs, a UK software studio. Software and AI Engineer with hands-on experience engineering intelligent applications, RAG workflows, and cloud-native systems. Proficient in Python, TypeScript, and React, with practical experience using LLMs and vector databases to build production AI features.

EDUCATION

Nottingham Trent University — BSc (Hons) Computer Science

September 2023 – June 2026

Grade: Upper Second-Class Honours (2:1). Modules: AI & Machine Learning, Software Engineering, Information & Database Engineering, Cloud Computing, Mobile Development, Advanced Analysis & Design.

RELEVANT EXPERIENCE

Co-Founder and Lead Developer (Self-employed) — Artim Labs

January 2026 – Present

- Co-founded a UK studio building apps, bespoke software, third-party integrations and operations systems; lead engineering while co-founder leads design and brand.
- Client project (TRUKBK): engineered a hallucination-resistant AI Sales Concierge using a custom RAG pipeline with vector embeddings and cosine similarity search (Supabase pgvector) and Google Gemini for generation.
- Implemented a 2-layer fallback architecture preventing customer-facing errors during API quota limits, and shipped a multi-site franchise operations platform and an HR app tracking right-to-work and document expiries.
- Stack: Python, TypeScript, React, React Native, Flask, PostgreSQL, Docker, plus LLM and vector DB integration.

Software Engineer (Freelance) — Arasan Travels

August 2025 – January 2026

- Architected a custom full-stack travel booking platform on a serverless pnpm monorepo, with a type-safe automated booking pipeline and Stripe payment reconciliations, reducing administrative overhead by 15%.

Application Developer & Store Assistant (Contract) — PHAT Buns UK

April 2024 – December 2025

- Engineered 'PhatOps', a cross-platform operations app deployed on the App Store across 4 branches; identified operational bottlenecks in daily store workflows and translated them into app requirements.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, HTML, CSS

Frameworks: React, React Native, Node.js, Django, Flask, PyTorch, TensorFlow

AI Agents & GenAI: RAG Workflows, Supabase pgvector, Prompt Engineering, Agentic Systems (ReAct)

Tools & DevOps: Docker, Git, Azure, AWS, Cursor and Claude

Concepts: RESTful APIs, OOP, Agile/Scrum, Software Testing (pytest, JUnit), Neural Networks, NLP, Deep Learning, MLOps

PROJECTS

PhatOps — React, TypeScript, Tailwind, PostgreSQL

September 2025 – December 2025

- Released and deployed on the iOS App Store, currently active across 4 PHAT Buns branches with rollout planned for 16 additional branches.
- Reduced frontend rendering latency by 20% through optimised reusable components and Supabase queries.

CePTFlow Intelligence Suite — Python, Flask, Google Gemini (RAG), PostgreSQL

June 2025 – August 2025

- Engineered a RAG-driven inventory intelligence platform combining Holt-Winters time-series forecasting with agentic AI to analyse historical sales and optimise supply chain decisions.
- Architected a self-healing LLM integration layer that automatically resolves API failures (429/404) via model rotation.
